

**"Expandable unit, in particular for houses or
offices"**

ABSTRACT

An expandable unit in particular for houses or
5 offices, which is produced in the form of a container
and is unusually capable of achieving a very good ratio
between the initial and final volumes, comprises a basic
module provided with at least a roof supported by
uprights, and at least one extractable module
10 operatively associated with the basic module so as to
translate relative thereto. The extractable module
comprises a base and a roof, which are parallel to the
roof of the basic module, and side walls which connect
the base and the roof so as to form a parallelepiped,
15 open on one side corresponding to the side that is
inside the basic module. The extractable module
comprises at least an outer portion and an inner
portion, slidable relative to one another. The base of
the inner portion comprises at least a first portion and
20 a second portion connected to one another by hinges.
